

Energy & Infrastructure

Hydrogen

Alternatives to fossil fuels are needed for the long-term success of the energy transition. Hydrogen will play a key role in this as a versatile energy carrier and make a significant contribution to completely decarbonising the energy sector, making it more efficient and advancing sector coupling.

Our Energy & Infrastructure Sector Group provides comprehensive support regarding construction and development of infrastructure, regarding all challenges of operation and with respect to all issues of the rapidly changing regulatory framework. We combine our expertise across practices with extensive industry knowledge and have many years of experience in advising on energy law and regulatory issues that are also relevant to an evolving hydrogen industry.

Advice in the areas of:

- Regulation of (hydrogen) networks
- Contract design and management along the entire value chain, in particular plant construction (EPC, EPCM and O&M contracts)/ hydrogen plant construction
- Public-law approval of hydrogen production plants, storage facilities and in relation to transport
- Storage & transport
- Safety regulations
- Regulatory framework of the consumption sectors (industry, mobility, etc.)
- Monitoring of ongoing legislative processes (national & EU)
