

Data Act Scoping Tool

Structured. Efficient. Practical.

The EU Data Act is one of the key new pieces of legislation governing the European data economy. The Data Act came into force in January 2024 and requires companies to implement new rules on data use, data sharing, and data access. Companies now have until September 12, 2025, to adapt their data structures, contracts, and processes to the new requirements. With our newly developed Data Act Scoping Tool, you can use a self-assessment to check whether your products and services fall within the scope of Chapter 2 of the Data Act, which covers rules on access to, and the provision and sharing of, data from connected products and related services.

Your advantages at a glance

- **Structured:** Clearly structured self-assessment to check whether your products and services are affected by the Data Act.
- **Efficient:** Targeted questions and immediate evaluation for a quick overview of your potential compliance requirements.
- **Practical:** Initial self-assessment based on legal requirements to prepare for further measures.

How the self-assessment works

Our Data Act Scoping Tool guides you through the most important requirements of Chapters 1 and 2 of the Data Act in three steps:

- **Part 1:** Determine whether it is a related product, a connected service, or a virtual assistant.
- **Part 2:** Check whether a relevant data category is affected.
- **Part 3:** Determine whether data ownership exists.

→ **At the end,** you will receive a report that clearly summarizes the results for you and serves as a basis for your next steps.

Who is the Data Act Scoping Tool suitable for?

- **Target group:** Companies that develop or distribute data-based products and services, platform operators, and organizations that need to regulate data access—as well as anyone who wants to ensure compliance at an early stage and take advantage of the opportunities offered by the Data Act. The Data Act Scoping Tool is designed so that no legal training in the Data Act is required to use it.
- **Transparent costs:** Monthly license fee of EUR 4,890, cancellable at any time at the end of the quarter.
- **Flexible use:** Ideal for quick initial assessment and structured preparation for necessary measures under the Data Act.
